

Clean

Mv Series
Clean Agent
Fire Suppression System
for use with 3M™ Novec™ Fire Protection Fluid

Advantages

The Mv Series Clean Agent Fire Suppression System utilizes 3M™ Novec™ 1230 Fire Protection Fluid as the extinguishing medium. Novec 1230 fluid is a clear, colorless and low odor liquid perfectly suited to protect high value assets in areas that may be normally occupied, in locations where clean-up of other agents is problematic, when storage space for a fire suppression agent is restricted, or when an electrically non-conductive agent is required. Each system consists of the following components and their associated accessories:

1. Agent Storage Components - Storage components consist of the cylinder assembly(s), which contains the Novec 1230 fluid, and the cylinder bracket(s), which holds the cylinder assembly securely in place.

2. Agent Fluid Distribution Components - Distribution components consist of the discharge nozzles used to introduce the Novec 1230 fluid into a protected hazard along with the associated piping system used to connect the nozzles to the cylinder assembly.

3. Trim Components - Trim components complete the installation of the suppression system and consist of connection fittings, pressure gauge, low-pressure supervisory switch, electric valve actuator, and manual valve actuator.

4. Slave Arrangement Components - Slave arrangement components consist of the pneumatic valve actuator(s), actuation check valve, vent check, actuation hose, and fittings required for a multiple cylinder (slave) arrangement.

5. Supplemental Components - Supplemental components include the discharge pressure switch and manifold check valve. They supplement the core equipment or complete a specific multi-cylinder configuration.

6. Control Panel - This device monitors the condition of the electric actuator, detectors, warning devices, cylinder pressure, and any manual release and abort stations. All electric or electronic devices must connect to the control panel in order to function.

7. Detection and Alarm Devices - Detection devices coupled with manual release and abort stations maximize system efficiency while audible and visual alarm devices alert staff of alarm conditions.

Typical Clean Agent System Layout

Nominal Cylinder Size	P/N	Fill Capacity				Empty Weight	
		Minimum		Maximum		lb	kg
		lb	kg	lb	kg		
250 lb	20506	126	57.2	252	114.3	213	96.6
420 lb	20507	211	95.7	422	191.4	279	126.6

Equipment Description

The Novec 1230 fluid is stored as a liquid in cylinder assemblies designed specifically for the application and charged to a fill density of between 35 lb/ft³ (561 kg/m³) and 70 lb/ft³ (1121 kg/m³). To ensure optimal performance, each cylinder is superpressurized with dry nitrogen to 360 psi (24.8 bar) at 70°F (21°C). An identification label is affixed to the cylinder body indicating the fill quantity of Novec 1230 fluid, charging pressure, date of fill, and fill station. The Mv Series supports two cylinder capacities.

Cylinder Valve: The automatic release of Novec 1230 fluid is controlled by a forged brass, differential pressure operated cylinder valve connected to the neck of the cylinder. The valve assembly is shipped with an anti-recoil safety device installed in the discharge outlet and chained to the cylinder valve.

Dip Tube: A threaded, rigid dip tube extends from the cylinder neck down to its bottom.

Cylinder: The light walled, welded seam cylinder is manufactured according to the requirements of the U.S. Department of Transportation (USDOT) and Transport Canada (TC) for compressed gas. Internal neck threads allow connection of the cylinder valve. The cylinder is designed for mounting in a vertical position only.

Liquid Level Indicator: A liquid level indicator located on the cylinder body is a nonmagnetic tube containing a measurement tape attached to a magnet. As the tape is removed, the magnet will engage at the liquid surface. This measurement is compared with a chart in the design manual to determine the current fill weight of the cylinder.

The cylinder assembly is composed of a cylinder, dip tube, cylinder valve, and liquid level indicator.

Protection

The cylinder valve has six key features:

Valve Actuation Connection: A threaded connection located on top of the cylinder valve serves as the attachment point for the electric (primary) or pneumatic (slave) valve actuator.

Pressure Gauge Connection: A female connection serves as the attachment point for the pressure gauge. It is fitted with an internal check valve to allow removal of the gauge while the cylinder is pressurized.

Low-Pressure Supervisory Switch Connection: A female connection serves as the attachment point for the low-pressure supervisory switch. An internal check valve allows for removal of the pressure switch while the cylinder is pressurized.

Rupture Disc: A frangible rupture disc fitted to the cylinder valve body functions as an emergency relief device in the event of excessive pressure within the cylinder. Its rupture point is between 850 psi (58.6 bar) and 1000 psi (68.9 bar).

Discharge Outlet: A 2 in (50 mm) grooved connection serves as the attachment point for discharge connection fittings.

Pilot Actuation Port: A 1/4 in (8 mm) NPT connection (shipped with a removable plug) provides a means of applying actuation pressure to the slave cylinder(s). This can also be used for attachment of the discharge pressure switch in single cylinder arrangements. The port is pressurized only during the 10 second discharge period.

Wall Mount Cylinder Bracket Assembly (P/N 18535)

Cylinder stability is ensured by the cylinder bracket assembly, consisting of one strap and rail with accompanying bolts, nuts, and washers. The rail is slotted for ease of mounting with fasteners provided by the installer.

	Cylinder Dimensions			
	250 lb		420 lb	
	in	mm	in	mm
H1	54.17	1376	76.37	1940
H2	40.00	1016	62.19	1580
H3	19.8	503	36.8	935
D1	16.0	406	16.0	406
D2	17.9	455	17.9	455

Trim Components

Trim components are required to operate the clean agent cylinder(s).

Discharge Connection Fittings (P/N See Diagram)

A 2 in (50 mm) grooved elbow, coupling, and NPT adapter nipple connect to the grooved outlet adapter utilizing the coupling factory installed to retain the anti-recoil safety device. Pipe and fittings beyond the 2 in (50 mm) adapter nipple are to be supplied by the installer.

Low-Pressure Supervisory Switch Assembly (P/N 18775)

The low-pressure supervisory switch continuously monitors the pressure of the cylinder. The contact configuration is single pole, single throw (SPST) with contacts rated 1.5 Amps at 24 VDC. Should the cylinder pressure drop to approximately 280 psi (19.3 bar), the switch contacts will close transmitting a signal to the system control panel.

Pressure Gauge Assembly (P/N 20529)

NFPA 2001 mandates a pressure gauge for each cylinder as a method of visually monitoring the internal pressure condition of the cylinder assembly.

Electric Valve Actuator (P/N 18481)

The electric valve actuator attaches to the primary cylinder at the valve actuation connection and is utilized to automatically open the cylinder valve upon receipt of a signal from the control panel or other source. It operates between 17 and 30 VDC and consumes 500 mA (.5 Amps) at 24 VDC nominal with a maximum supervisory current of 30 mA (0.03 Amps).

The electric valve actuator body is steel construction with a brass knurled swivel nut and a stainless steel actuation pin that depresses the valve core when energized.

Manual Valve Actuator (P/N 17001)

An optional manual valve actuator attaches to the top of the electric valve actuator and provides a means to manually open the cylinder valve. The manual valve actuator consists of a brass body, stainless steel actuation pin, and steel safety ring pin.

To discharge the primary cylinder manually, the ring pin is removed and the emergency release button is depressed forcing the pin in the electric valve actuator to depress the valve core of the cylinder valve. All other connected cylinders will be opened pneumatically.

Slave Arrangement Components

Up to 16 cylinders (1 primary and 15 slave) may be installed in a single arrangement, with a maximum length of 100 ft (30.48 m) of pilot actuation hose or tubing extending from the primary cylinder in either direction. A typical arrangement is shown below.

1/4" (8 mm) FNPT

Knurled Nut

1/4" (8 mm) MNPT

1/4" (8 mm) 37° Male JIC

1/4" (8 mm) MNPT

1/4" (8 mm) MNPT

1/4" (8 mm) 37° Male JIC

1/4" (8 mm) 37° Male JIC

1/4" (8 mm) MNPT

Pneumatic Valve Actuator (P/N 17019)

On multiple cylinder systems the electric valve actuator will open the primary cylinder and then, in a rapidly occurring sequence, the pneumatic valve actuator(s) will open all other cylinders using pressure from the primary cylinder.

A pneumatic valve actuator attaches to the valve actuation connection of each slave cylinder. It receives pressure from the pilot actuation port of the primary cylinder through the pilot actuation check valve. It is brass with a brass piston and pin.

Vent Check (P/N 10173)

The vent check is a safety device with 1/4 in (8 mm) MNPT threads that is to be installed in the pilot actuation line downstream of the pilot actuation check valve. It is used to bleed off pressure that may accumulate in the pilot actuation hose or piping minimizing the chance of inadvertent operation of the pneumatic actuators or discharge pressure switch.

Pilot Actuation Check Valve (P/N 18560)

A 1/4 in (8 mm) MNPT by 37° male JIC check valve is installed in the pilot actuation port of the primary cylinder valve with direction of flow OUT of the valve. When the valve opens, pressure will be directed through the pilot actuation check valve to the pneumatic valve actuators on the slave cylinders. The purpose of the pilot actuation check valve is to ensure the pneumatic actuator(s) remain pressurized for the entire discharge period.

Male NPT Adapter (P/N 18625)

A 1/4 in (8 mm) 37° male JIC by MNPT adapter fits into the pilot actuation end line tee of the final slave cylinder to facilitate the attachment of the pilot actuation line. It also may be utilized to allow the attachment of flex hose to the discharge pressure switch.

Pilot Actuation Mid Line Tee (P/N 18622)

A 1/4 in (8 mm) 37° male JIC by MNPT brass branch tee is utilized to attach the pilot actuation line to the pneumatic valve actuator.

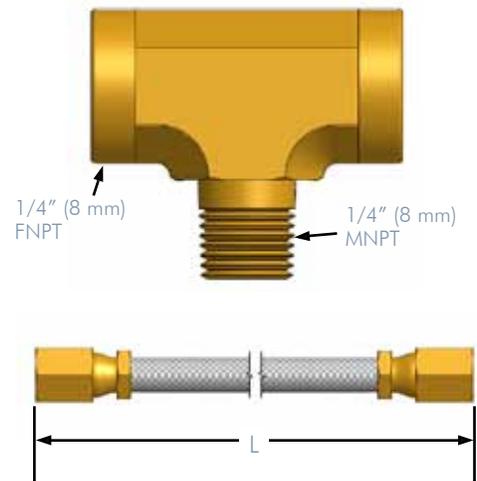

Pilot Actuation End Line Tee (P/N 18611)

A 1/4 in (8 mm) FNPT by MNPT brass branch tee mounts to the final pneumatic valve actuator to facilitate attachment of the vent check to the pilot actuation line.

Flex Hose (P/N See Chart)

Flex hoses are 3/16 in (7 mm) Teflon® lined stainless steel wire braided hoses of varying lengths with 1/4 in (8 mm) 37° female JIC flare fittings. They are utilized to interconnect cylinders when a slave arrangement is required.

P/N	Hose Length (L)
18648	16 in (406 mm)
18649	24 in (610 mm)
18650	34 in (864 mm)
18651	40 in (1016 mm)

Supplemental Components

Supplemental components complete various system arrangements.

Discharge Pressure Switch (P/N 18773)

The discharge pressure switch is used in the system to provide positive indication of agent discharge and to initiate the shut down of equipment that may deplete agent concentration. The pressure switch is a single pole, double throw (SPDT) switch with contacts rated 10 Amps resistive at 30 VDC.

Manifold Check Valve (P/N 18546)

In a multiple cylinder arrangement where the slave and primary cylinders share a common manifold or in a main / reserve arrangement, a 2 in (50 mm) FNPT manifold check valve must be placed between the discharge outlet of each cylinder and the discharge manifold to prevent back flow from the manifold should the system be inadvertently discharged when one or more cylinders are disconnected for maintenance. The take-out for the valve is 1.5 in (38 mm).

90° Corner Nozzle (4 Port) Arrangement

180° Sidewall Nozzle (6 Port) Arrangement

360° Radial Nozzle (8 Port) Arrangement

Discharge Nozzles

Discharge nozzles (4, 6, or 8 ports) are used to uniformly distribute the Novec 1230 fluid. They are performance tested to ensure that the agent is discharged within 10 seconds and properly dispersed throughout the protected area. Maximum nozzle height for a protected space is 18 ft 4 in (5588 mm) per tier of nozzles. Additional tiers are required for heights greater than 18 ft 4 in.

Ordering Instructions: Specify the Nozzle P/N followed by a dash and the three digits representative of the drill code as provided by the Janus Design Suite™ software. Example: 19529-XXX = Nozzle: 360°, 3/8" (10 mm), Brass (with drill code as specified)

Chemical Properties Of Novec 1230 Fluid

Novec 1230 fluid is formed from the elements carbon, fluorine and oxygen [CF₃CF₂C(O)CF(CF₃)₂ - dodecafluoro-2-methylpentan-3-one]. The primary extinguishing mechanism of Novec 1230 fluid is heat absorption, with a secondary chemical contribution from the thermal decomposition of Novec 1230 fluid in the flame. Novec 1230 fluid leaves no residue and is safe for use in occupied spaces.

Ozone Depletion Potential (ODP) – Novec 1230 fluid is a highly fluorinated ketone containing no chlorine or bromine. As a result, the ODP for Novec 1230 fluid is zero, meaning it has no effect on stratospheric ozone.

Global Warming Potential (GWP) – Novec 1230 fluid has an atmospheric lifetime of only 0.014 years. The global warming potential for all practical purposes is negligible.

Safety Considerations

Although the EPA Significant New Alternative Program (SNAP) lists Novec 1230 fluid as acceptable for occupied spaces, NFPA Standard 2001 and SNAP list the following guidelines for human exposure:

Novec 1230 fluid has a NOAEL¹ of 10.0% v/v with no restrictions. The maximum exposure time shall not exceed five (5) minutes. Avoid any exposure greater than 10% v/v (LOAEL²).

The discharge of Novec 1230 fluid into a hazard may reduce visibility for a brief period.

When Novec 1230 fluid is exposed to extremely high temperatures, the by-product Hydrogen Fluoride (HF) will be formed. Novec 1230 fire protection fluid systems are designed to discharge in 10 seconds or less in order to minimize the amount of HF formed.

The Material Safety Data Sheet (MSDS) on Novec 1230 fluid should be read and understood prior to working with the agent.

A cylinder containing Novec 1230 fluid should be handled carefully. The anti-recoil safety device must be in place at all times when the cylinder is not connected to the discharge piping and restrained.

¹ NOAEL (No Observed Adverse Effect Level) - The highest concentration at which no adverse toxicological or physiological effect has been observed.

² LOAEL (Lowest Observable Adverse Effect Level) - The lowest concentration at which an adverse physiological or toxicological effect has been observed.

Order Review List

P/N	Description	Nominal Ship Wt. lb (kg)
20506 ¹	Cylinder Assembly, Novec 1230 Fluid, 250 lb (126 to 252 lb capacity / 57.2 to 114.3 kg)	213 (96.6)
